The international monograph series “Fundamental Theories of Physics” aims to stretch the boundaries of mainstream physics by clarifying and developing the theoretical and conceptual framework of physics and by applying it to a wide range of interdisciplinary scientific fields. Original contributions in well-established fields such as Quantum Physics, Relativity Theory, Cosmology, Quantum Field Theory, Statistical Mechanics and Nonlinear Dynamics are welcome. The series also provides a forum for non-conventional approaches to these fields. Publications should present new and promising ideas, with prospects for their further development, and carefully show how they connect to conventional views of the topic. Although the aim of this series is to go beyond established mainstream physics, a high profile and open-minded Editorial Board will evaluate all contributions carefully to ensure a high scientific standard.

Contents

Introduction	1
Giulio Chiribella and Robert W. Spekkens	
Part I Foil Theories	
Optimal Information Transfer and Real-Vector-Space Quantum Theory	21
William K. Wootters	
Almost Quantum Theory	45
Benjamin Schumacher and Michael D. Westmoreland	
Quasi-Quantization: Classical Statistical Theories with an Epistemic Restriction.	83
Robert W. Spekkens	
Part II Axiomatizations	
Information-Theoretic Postulates for Quantum Theory	139
Markus P. Müller and Lluís Masanes	
Quantum from Principles.	171
Giulio Chiribella, Giacomo Mauro D’Ariano and Paolo Perinotti	
Reconstructing Quantum Theory	223
Lucien Hardy	
The Classical Limit of a Physical Theory and the Dimensionality of Space	249
Borivoje Dakić and Časlav Brukner	
Some Negative Remarks on Operational Approaches to Quantum Theory.	283
Christopher A. Fuchs and Blake C. Stacey	

Part III Categories and Convex Sets

Generalised Compositional Theories and Diagrammatic Reasoning . . .	309
Bob Coecke, Ross Duncan, Aleks Kissinger and Quanlong Wang	
Post-Classical Probability Theory	367
Howard Barnum and Alexander Wilce	

Part IV Quantum Versus Super-Quantum Correlations

Information Causality	423
Marcin Pawłowski and Valerio Scarani	
Macroscopic Locality	439
Miguel Navascués	
Guess Your Neighbour's Input: No Quantum Advantage but an Advantage for Quantum Theory	465
Antonio Acín, Mafalda L. Almeida, Remigiusz Augusiak and Nicolas Brunner	
The Completeness of Quantum Theory for Predicting Measurement Outcomes	497
Roger Colbeck and Renato Renner
